The following list is based on nomenclature in Hartman & Nelson's (2001) A Checklist of the Vascular Plants of Colorado; when the equivalent name in Allred's (2004, 21 Sep) A Working Index to New Mexico Vascular Plant Names differs in a substantive way (vs. authorities, rank, etc.), it is placed in square brackets []. Other relevant synonyms are placed in braces { }. Allred's checklist is superb in format and contents and is updated frequently.

Key: Bold = Plant species with scientific names in bold were collected only on the East Fort Jemez River loop, just east of crossing of NM route 4; this area is no longer owned by the Preserve. The number following the plus sign (0+1, 4+3) indicates the number of collections from that area.

* = Invasives and introductions from outside NA.

+ = Invasives and introductions from elsewhere in NA.

! = First report of a taxon for New Mexico.

[JC] = Indicates a taxon collected by Jonathan Coop; vouchers at the University of Wisconsin.

[BJ] = Indicates a taxon collected by Brian Jacobs; vouchers at RM.

[HPNM] = Heritage Program New Mexico, indicates a taxon collected by Phil Tonne or Yvonne Chauvin; vouchers checked by RLH, housed at the University of New Mexico.

[NLO] = Neal L. Osborn (1966), voucher confirmed at UNM Herbarium.

[6, 6+2] = Number of collections per taxon by authors; the sole number or the one preceding the plus sign. As mentioned above, the number following the plus sign (+) indicates the number of collections taken from the E Fork Jemez River loop, and area no longer owned by the Preserve.

Documented size of the flora of Valles Caldera National Preserve based on **5182 (+161** from the E Fork Jemez River loop) voucher collections by author and other workers. This figure represents more than 37 collections per square mile, by far the most dense sampling for any of our surveys.

Summary of floristic inventory for May 2001 through August 2004 for the Valles Caldera National Preserve (excluding the E Fork Jemez River loop):

Varieties -- refers to a second or a third variety of a species such as the *Heterotheca villosa* example below.

Unique taxa -- refers to each biological entity being counted but once. Thus the typical variety of

Artemisia ludoviciana would be counted as one unique taxon, var. *mexicana* as a second unique taxon; likewise each of the three varieties of *Heterotheca villosa* would be treated as a unique taxon.

	2001	2002	2003	2004
